

BioDigester™

Acidification of organic milk for calves

BioDigester is a complementary feed for acidification of organic milk for calves, containing dextrose, pectins, electrolytes (Na⁺, K⁺, Cl⁻) and lactic acid bacteria, which together have a positive impact on the calf gastrointestinal system.

BioDigester can be used in organic production in accordance with regulation (EF) 834/2007 and (EF) no. 889/2008.

BioDigester contains:

- Lactic acid bacteria acidify the milk and reduce growth of pathogenic microorganisms
- Pectins protect the intestinal wall and bind toxins
- Dextrose provides easily absorbable energy and stimulates absorption of Na⁺ from the intestine
- Electrolytes contribute to optimal salt and fluid balance

Benefits and effect:

- Increased digestibility of the milk
- Reduced pH value inhibits growth of E.Coli
- Stimulates a healthy gastrointestinal function
- Maintains the salt- and fluid balance
- Provides easily absorbable energy

Application:

Administer 15 grams of BioDigester per 10 litre of milk (35-40 °C) just before feeding to the calf. BioDigester should be used right from the start of milk feeding after birth.

Consumption:

2.5 kg are enough for approx. 1700 kg of milk.

Packaging:

- 2.5 kg bucket
- 4 buckets per box
- 120 buckets per pallet
