

# BioConcid™

## Efficient preservation of milk for calves

BioConcid is a complementary feed for preservation and acidification of milk for calves, which besides minimizing the growth of undesirable bacteria in the milk, also optimises coagulation of milk in the intestine, thus supporting milk digestibility.

*BioConcid can be used in organic production in accordance with regulation (EU) 2018/848*

### BioConcid contains:

- Preservatives which keep the milk fresh and palatable from start of collecting milk
- Citric- and sorbic acids for preservation and milk digestion
- Enterococcus Faecium to support acidification of milk and to keep it palatable
- Carob powder help supporting optimal gut function
- Electrolytes to contribute to optimum electrolyte balance

### Benefits and effect:

- Provides good milk hygiene from start of collecting milk
- Preservation of milk for keeping it fresh and palatable until use
- Supports healthy gastrointestinal flora
- Minimizes growth of undesirable microorganisms

### Packaging:

- Bucket of 4 kg or 10 kg
- 120 buckets with 4 kg per pallet
- 48 buckets with 10 kg per pallet

### Application:

Administer 1½ - 2½ grams of BioConCid per litre of milk, depending on the hygienic standard of the milk, storage temperature and the storage time. The highest dosage is recommended in summertime. To be used from the start of collecting milk in collecting tank.

### Consumption:

1 bucket (4kg) is enough to preserve 1600 to 2666 litres of milk.
